

ECE 131 Programming Fundamentals – Homework HW04

Remember to submit both actual source files and screen shots of the execution of the program. If you're having trouble, submit a screen shot showing compile commands and results, along with the source code. Sending screen shots of source code will not substitute for actual source files.

Chapter 6:

1. Exercise 6.3. Turn in a source code file named “ex6.3.c” and a screen shot of its execution.

Since you are no doubt doing ”Exercise 1” of all the chapters, you will have done Program 6.2, which will give you a big start on this exercise. Remember: %d in scanf()!

2. Exercise 6.4. Turn in a source code file named “ex6.4.c” and a screen shot of its execution.

Make it easy on yourself; instead of asking the user for data, initialize the array in your code so you can calculate the average by hand to make sure your C calculation is correct.
